

# Stealing the Best Ideas from DevOps

A Guide for Sysadmins without Developers

**Thomas Limoncelli**

**Christine Hogan**

# Who are we?

## Tom Limoncelli

- SRE Manager at Stack Overflow
- Sysadmin since 1988 (Google, AT&T/Bell Labs, Mentor)
- Blog: [EverythingSysadmin.com](http://EverythingSysadmin.com)  
Twitter: @YesThatTom
- Author...

## Christina Hogan

- Principal Network Engineer at AT&T (Switzerland)
- Sysadmin for 20 years
- Ex- Formula 1 race car aerodynamics designer
- Author...

Recruiting

HR

IT

Team

# New Employee Onboarding

- **Process:** Ad hoc. Improvised. Broken.
- **Communication:** Terrible. IT given no warning about arrivals.
- **Trying New Things:** Out of the question.
- **Result:**
  - New employees unproductive for 4 weeks.
  - First impression: I just joined a company of idiots.
  - Everyone blames the IT department.

# New Employee Onboarding

- **Process:** Got agreement on a “onboarding timeline”.  
Automated OS install/config for workstations.
- **Communication:** ID’ed process owner. Communication channels.
- **Trying New Things:** Google Sheets -> Trello -> Custom app.  
Efficiency through alignment: Monday is Start Day.
- **Improvements:**
  - New employees: Productive on day #1.
  - First impression: Excellence/cooperation/efficiency.
  - Less work for everyone involved!
  - Opened the door to software to manage accounts, machines, etc.

# And more...

Customer support escalations:

Cust

Support

2nd Tier

PM/Dev

Product fulfillment:

# **(1) The Three Ways of DevOps**

## **(2) The Small Batches Principle**

# The Small Batches Principle:

Doing work in small batches  
is better than big batches.

**[Work. Check. Work. Check. Work. Check.]**

**is better than**

**[Work, work, work, Check.]**

# StackOverflow.com

# StackOverflow.com

# Big Batch Failovers

- The NY Datacenter fails less than once a year.
- In that time:
  - “unintentional differences” accumulate.
  - New SRE team members are hired

# The 2013 failover was a “big batch”

- Took 10+ hours (15 minutes user-visible down-time)
- Required “hands on” by 3 teams.
- Found 30+ “improvements needed”
- Certain people were S.P.O.F.

# Needed: “small batch” failovers

- More frequent failovers == smaller accumulation of differences.
- So.... we **F**orce **F**ailovers **F**requently to achieve our “small batches”

# Drill Results

# Why?

- Each drill “surfaces” areas of improvement.
- Each member of the team gains experience and builds confidence.
- Highlighted automation, documentation, and resource needs.
- Frequency reduces risk!

# Other applications of SBP

	Big	Small
Desktop PC Upgrades	All PCs replaced next Thursday	"n" PCs replaced per week

# Other applications of SBP

	Big	Small
Desktop PC Upgrades	All PCs replaced next Thursday	"n" PCs replaced per week
New Email Sever	Service disabled for a weekend-long upgrade	Migrate n users each week

# Other applications of SBP

	Big	Small
Desktop PC Upgrades	All PCs replaced next Thursday	"n" PCs replaced per week
New Email Sever	Service disabled for a weekend-long upgrade	Migrate n users each week
Relationships	Letting frustration build up... then explode	Frequent constructive criticism

# Other applications of SBP

	Big	Small
Desktop PC Upgrades	All PCs replaced next Thursday	"n" PCs replaced per week
New Email Sever	Service disabled for a weekend-long upgrade	Migrate n users each week
Relationships	Letting frustration build up... then explode	Frequent constructive criticism
Weight Loss	"I'll lose 40 pounds"	"I'll lose 5 pounds, again and again"

## **(2) The Small Batches Principle**

# **(3) Minimum Viable Product**

# Minimum Viable Product

**Delivering some value sooner  
is better than all value later.**

# Minimum Viable Product

features, stuff,  
the goods,  
benefits

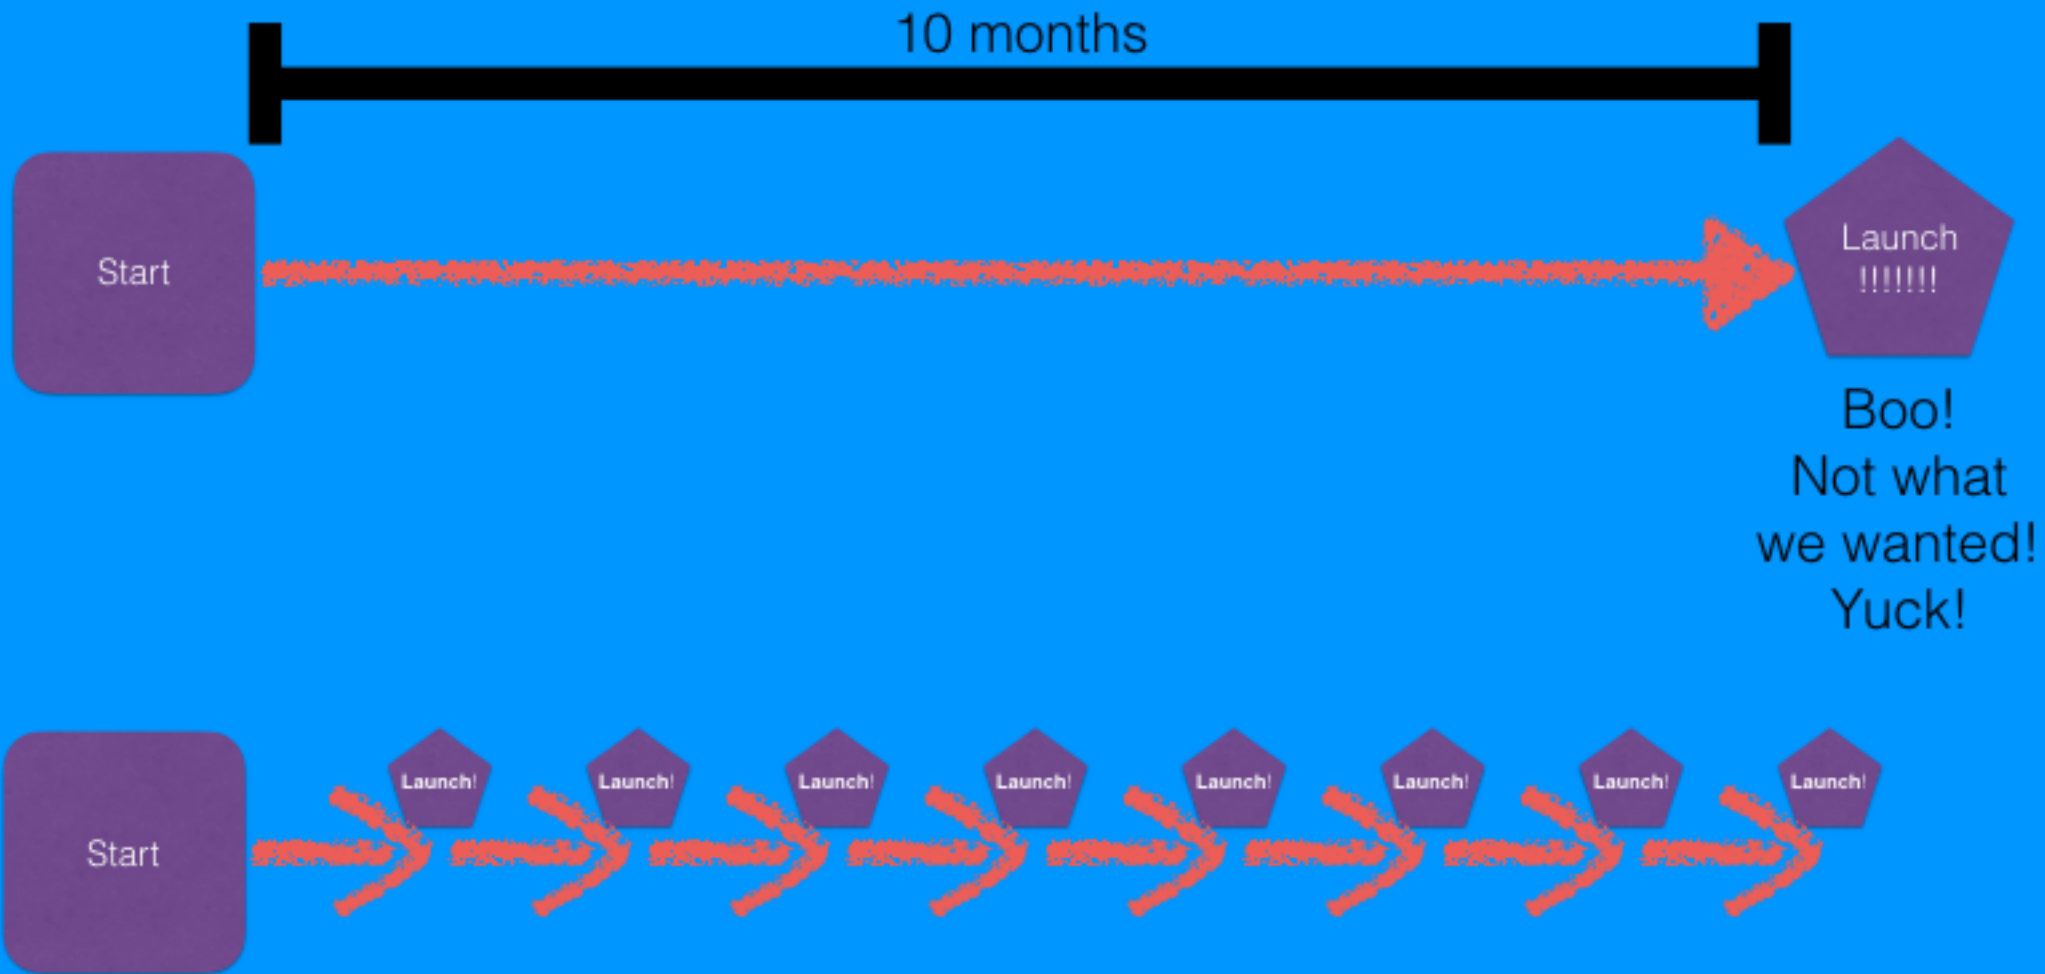

**Delivering some ~~value~~ sooner  
is better than all ~~value~~ later.**

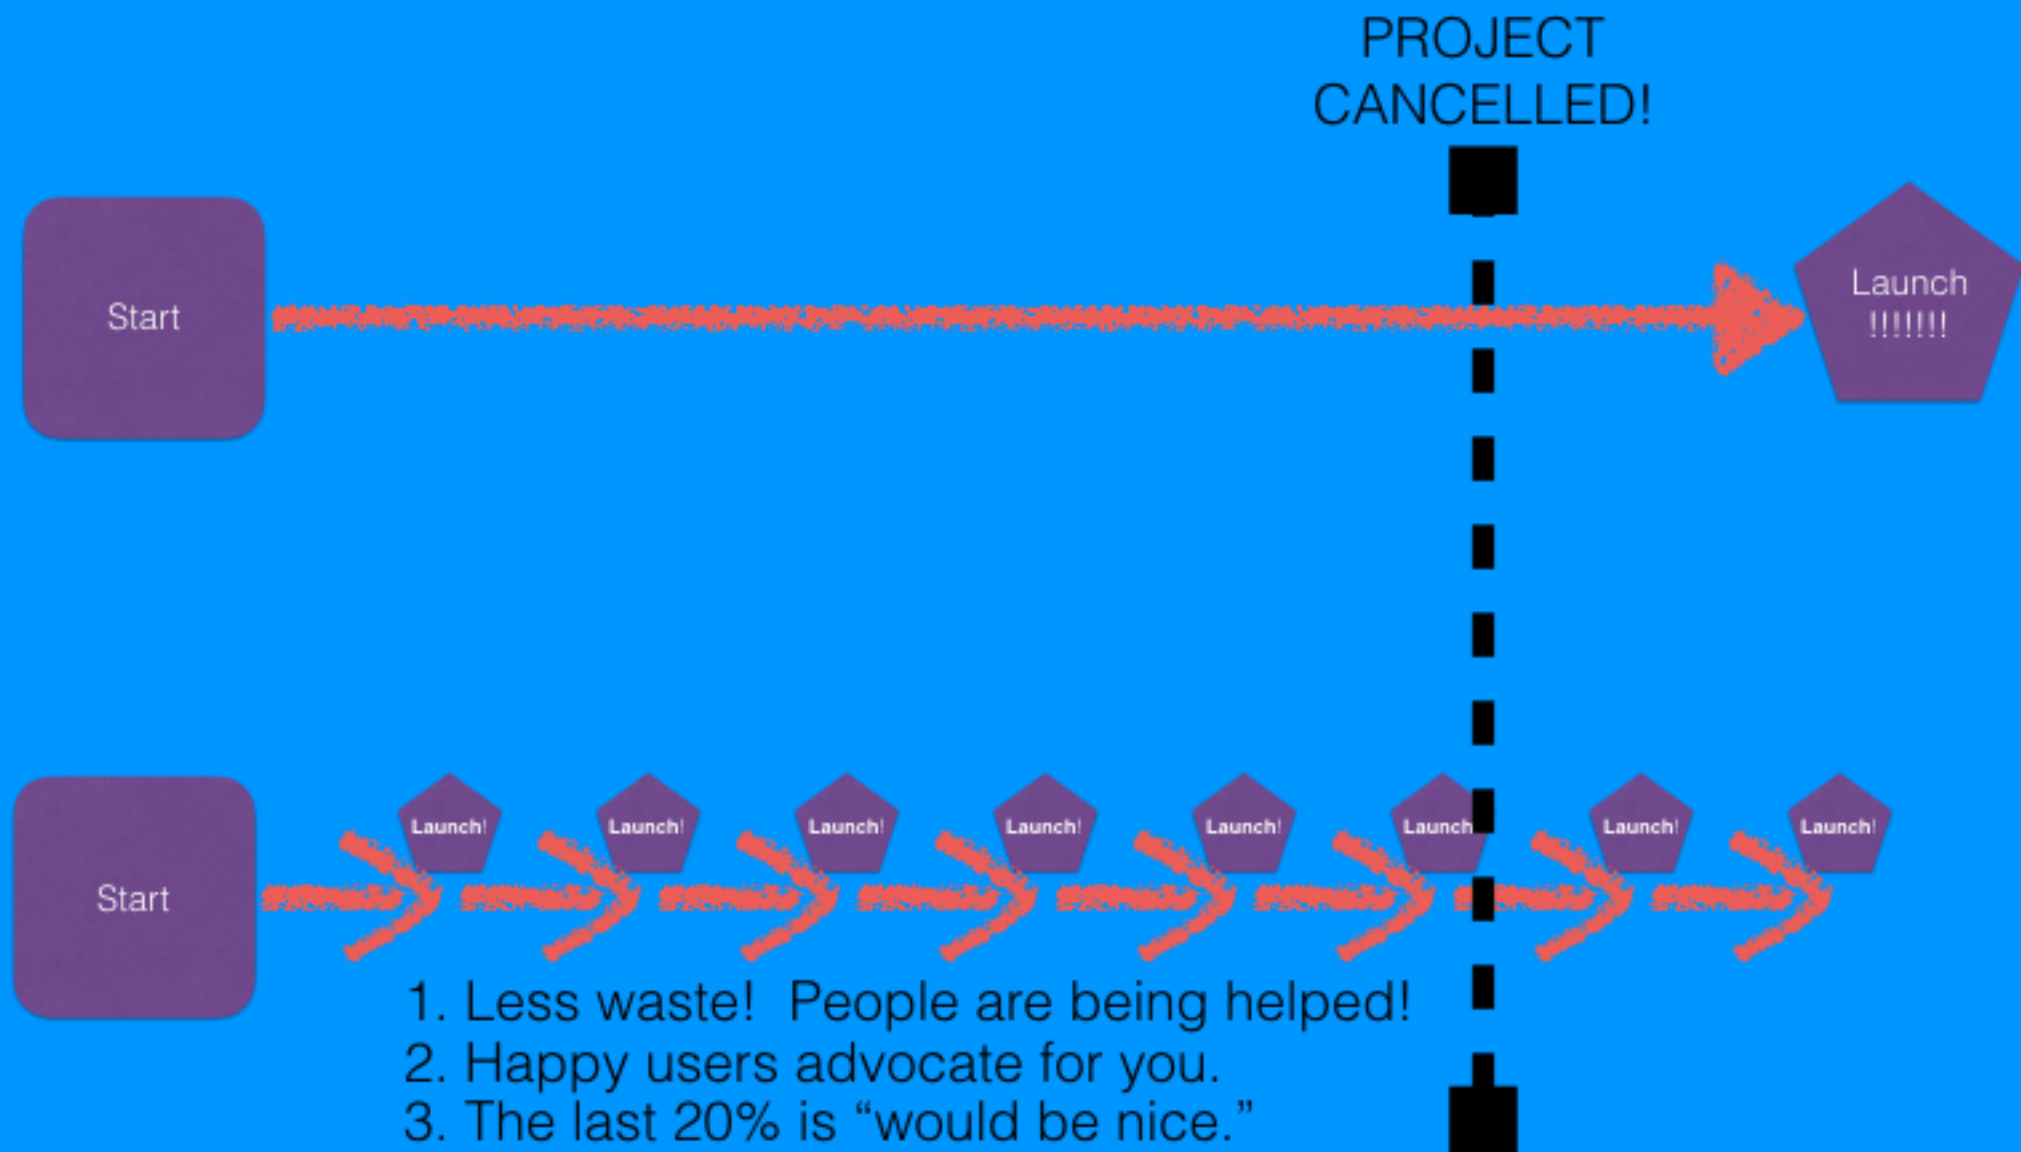

# Benefits

- You help people sooner! (“Accelerated Delivery of Value”)
  - One feature *now* is better than all features *later*!
- Earlier Feedback!
  - Validates assumptions.
- A chance to pivot!
  - Users don't like it? Change direction!
- SREs get a chance to develop operational expertise:
  - Run-book, Upgrade process, Failover practice, Documentation, etc.

# OS Install Automation

1. Replace “carrying DVD to desktop” with netboot.
  - Only a specific VLAN.
  - No OS customization.
  - No RAID/special NICs.

# OS Install Automation

1. Replace “carrying DVD to desktop” with netboot.
  - Only a specific VLAN.
  - No OS customization.
  - No RAID/special NICs.
2. Eliminate all prompts.
3. Customize OS.
4. Start Puppet.

# OS Install Automation

1. Replace “carrying DVD to desktop” with netboot.
  - Only a specific VLAN.
  - No OS customization.
  - No RAID/special NICs.
2. Eliminate all prompts.
3. Customize OS.
4. Start Puppet.
  - Activate for more VLANs.
  - Handle RAID controllers.
  - Dual NICs.
  - Replicate in other buildings.
  - Add host to inventory.
  - Choice of disk layouts.
  - Other operating systems.
  - Boot LiveCD.

Start

The diagram consists of a blue rounded rectangle on the left containing the word 'Start'. A thick, textured orange arrow points from this rectangle to a blue pentagon on the right. Inside the pentagon, the word 'Launch' is written above six exclamation marks '!!!!!!'.
