# Something you have...

# Goal:

Perform a comparative usability study of five 2FA methods

#### 2FA banking studies

• Piazzalunga [2005], Weir [2009, 2010], Gunson [2011]

#### Security key setup

• Das [FC 2018]

#### Setup of four 2FA methods

• Acemyan [HFES 2018]

#### Day-to-day usability

• Krol [USEC 2015], Reynolds [S&P 2018]

### Previous 2FA User Studies

# Study Design

Compare five factors across a single application Reduce confounding factors Gather timing data

Examine setup and day-to-day usability independently Avoid bias

### Two Parts

- 1. Two-week between-subjects usability study
- 2. Within-subjects laboratory setup study

### Two Week Study Methodology

72 PARTICIPANTS (6 GROUPS OF 12)

#### SIMULATED ONLINE BANKING WEBSITE

#### 12 BANKING TASKS

# Findings

**Authentication SUS Scores** 

# Qualitative Results

### Security and Inconvenience

**P25:** "In my opinion, it may be a little obsessive for everything, but for banking it's something that I actually do want some authentication. I almost wish that it was a requirement that the bank said, oh here set [two-factor authentication] up. Because now that I think about it, I don't know how to set up 2FA with my bank. If it were an option I would definitely use 2FA."

### Availability of Second-factor Device

**P42:** "Honestly, once I'm home I kind of just set my phone down and forget where I put it sometimes, so that was a little bit hard ... I needed to go find my phone and pull up the app."

### Not a Target

**P8:** "I mean, you hear a lot about stuff being broken into; I just don't think I have anything that people would want to take from me, so I think that's why I haven't been very worried about it."

# Day-to-day Usability?

https://media.giphy.com/media/cN3TDDF02WCT6/giphy.gif

#### University population

## Limitations

#### Simulated banking environment

2FA for every authentication attempt

## Setup Study Methodology

30 participants

Setup each 2FA method

Used counterbalancing to account for ordering effects

# Setup Usability?

https://media.giphy.com/media/cXMbxzMdXdVGwDZbyS/giphy.gif

#### University population

## Limitations

Provider-specific setup implementation

Unfamiliarity with provided phone

### 

Well-implemented 2FA methods may be set up and used without major difficulty

Home users may not always have access to second-factor device

# Conclusion

E

Users differentiate between high and low value accounts

Time to authenticate decreases with familiarity (U2F, TOTP)

Faster authentication does not necessarily mean higher usability

# Thank you
